WORK EXPERIENCE

Demiurge Studios

July 2023 – August 2025

Associate Software Engineer

Boston, MA

- Developed features for Riot Games' live-service game Teamfight Tactics across PC and mobile clients
 - * Supported bi-weekly patches and content releases to over 33 million global players
 - * Implemented PC and mobile game features in a proprietary C++-based engine to maintain platform parity and functionality between release versions
 - * Regularly collaborated with project managers, designers, artists, and QA to meet client requirements
 - * Led the development of a mobile home page redesign with a team of artists as the sole engineer for a major update
- Created internal prototypes in Unreal Engine (C++) and Unity (C#) for client pitches and proofs of concept

myBlueprint

May 2021 – May 2022

Front End Engineer Intern

Toronto, ON

- Contributed to SpacesEDU, a digital portfolio platform for K-12 students used by over 50 school districts across Canada
 - * Developed web interfaces to support competency and evidence-based learning in React such as multi-media posts, chat, and assessments
 - * Collaborated with designers and supported QA with regression testing and rigorous automated testing with Jest to maintain live functionality
 - * Researched and implemented web accessibility practices such as WAI-ARIA to meet WCAG 2 AA accessibility standards

Centivizer

September 2020 – April 2021

React Game Developer

Toronto, ON

- Created cognitive assessment games with React for behavioral scientists and over 500 study participants
 - * Implemented new features and created graphics to support individual research requirements
- Designed and developed 2RaceWithMe, a web application to encourage physical and cognitive health for the elderly
 - * Designed and implemented video-calling UI for a cycling game
 - * Composed an admin dashboard in Figma for monitoring application usage and statistics for care homes and researchers

CNN

June 2019 – August 2019

Broadcast Engineering & Systems Technology Intern

Washington, D.C.

- Provided technical support across divisions such as newsgathering and broadcasting to production
- Design webpage improvements to improve the usage and visibility of podcast features on articles

PROJECTS

Game Development | Godot (GDScript), Unity (C#), Unreal Engine (C++), Blender

May 2018 – Present

- Regularly develops solo games across multiple genres and engines, primarily 3D games with Godot
- Collaborates with others as a programmer and designer for game jams and long-term projects
- Explores various aspects of development such as illustration, music composition, and 3D modeling

OWTV.gg | TypeScript, React, Next.js, Tailwind, Express

August 2025 – Present

- Contributes to a community-driven news platform for Overwatch esports with over 5000 followers
- Designing the Next.js front-end and supporting REST API development with Express

EDUCATION

University of Toronto, St. George Campus

Toronto, ON

Bachelor of Science in Computer Science

July 2023
